

## **Product Data Sheet**

## **ECOSHIELD®**

**Description** ECOSHIELD is a two-component glass flake reinforced vinyl ester

coating system with extremely good adhesion, superior corrosion cavitation erosion protection. Suitable for steel, aluminium, and

glass reinforced plastic.

Typical use ECOSHIELD is typically used for rudders, thrusters, nozzles,

thruster tunnels and general structural steel.

**Product information** 

Colors All RAL colors available to order.

Toxicity Nil (biocide free)

Volume solids $84 \pm 2 \%$ Flash point $31 \,^{\circ}\text{C} \, (88 \,^{\circ}\text{F})$ Density $1.32 \, \text{kg/l}$ VOC $240 \, \text{g/l}$ 

Shelf life 12 months at 25 °C (77 °F) from time of production.

Depending on storage conditions, mechanical stirring may be necessary before usage. If shelf life is exceeded, please contact

SUBSEA INDUSTRIES for further advice.

Storage temperature 1

Maximum 25 °C (77 °F), store in dry and shaded conditions

Temperature limits Minimum -60 °C (-76 °F)

Maximum 170 °C (338 °F), in dry or gas conditions

Surface preparation SA 2½ (ISO 8501-1) or SSPC-SP 10 (SSPC) near-white metal

abrasive blast cleaning, with a minimum surface profile of 75

microns (3 mils).

To secure lasting adhesion all surfaces shall be clean, dry, and free

from any contamination.

Application details

Application method Airless spray

Brush (only for touch up or stripe coat)

Spray equipmentPump ratio 63:1 or higherSpray tip631 reversible spray tipThinnerStyrene (2.5 % mixing ratio)

Catalyst Butanox LPT-IN (1-2 % mixing ratio, see application guide)

Cleaning Acetone

Total DFT 1000-1500 microns (40-60 mils) Dry Film Thickness (2-3 layers)

DFT/coat 500 microns (20 mils) Dry Film Thickness WFT/coat 625 microns (25 mils) Wet Film Thickness

Pot life 30 minutes at 20 °C (68 °F)

Overcoat time Minimum: 3 hours at 20 °C (68 °F)

Maximum: indefinite (if clean)

Issued: October 2024

Conditions Relative humidity should be below 85 %.

Surface temperature during application and curing should be at

least 3 °C (6 °F) above dew point.

Surface temperature during application and curing should be above

 $0 \, ^{\circ}\text{C} \, (32 \, ^{\circ}\text{F})$  and below  $60 \, ^{\circ}\text{C} \, (140 \, ^{\circ}\text{F})$ .

Spreading rate

Theoretical coverage 1.23 l/m<sup>2</sup> per 1000 microns DFT

Practical coverage 2 1/m<sup>2</sup> required per 1000 microns DFT (estimation, may vary

depending on surface area, shape, and type of application).

**Health and safety** Handle with care. Before and during use, observe all safety labels

on packaging and cans, consult SUBSEA INDUSTRIES Material Safety Data Sheets and follow local safety regulations. Avoid inhalation, avoid contact with skin and eyes, and do not swallow.

## LIMITATION OF LIABILITY

The information in the data sheet is based upon laboratory tests we believe to be accurate and is intended for guidance only. All recommendations or suggestions relating to the use of the Subsea Industries products, whether in technical documentation, or in response to a specific enquiry, or otherwise, are based on data which to the best of our knowledge are reliable. The products and information are designed for users having the requisite knowledge and industrial skills and it is the end-user's responsibility to determine the suitability of the product for its intended use.

Subsea Industries has no control over either the quality or condition of the substrate, or many factors affecting the use and application of the product. Subsea Industries does therefore not accept any liability arising from loss, injury or damage resulting from such use or the contents of this data sheet (unless there are written agreements stating otherwise).

The data contained herein are liable to modification because of practical experience and continuous product development.

This data sheet replaces and annuls all previous issues, and it is therefore the user's responsibility to ensure that this sheet is current prior to using the product.
